Coordinator Diedre Tanenberg (and Sup. Melgar),

Dear Commission on the Environment, Supervisor and Mayor,

My name is Gayle Markow. I have lived in San Francisco for 54 years. I'm a retired RN, and worked for most of my career at SF General Hospital. I live in District 7. I strongly support increasing staffing for the Department of the Environment. We cannot do the urgent work called for by the Climate Action Plan if we are unwilling to commit General Fund revenue to climate programs, and increasing staffing is a major first step.

I also would like to echo the call started last year for 1% for Climate Equity. The money it calls for – about \$125 million per year – is just a drop in the bucket on the down payment needed to fund a response to the climate emergency, but it will fund much-needed programs in electrification, transportation mode shift, just transition, and climate justice.

We can't avert climate disaster without immediate action. We need real and increased funding to deal with this emergency.

Thank you.

Best,

Gayle Markow

Coordinator Diedre Tanenberg (and Sup. Mandelman),

Dear Commission on the Environment, Supervisor and Mayor,

By now, everyone knows how very, very dire the climate crisis is already, and how very much worse it's going to get with each passing year. There is no excuse for not doing as much as we can to pour water on this fire.

I was impressed with the scope of SF's new Climate Plan. Obviously, none of that can happen without funding. Please commit to 1% of the city's budget going to the SF Dept of Environment. It is such a small amount, considering that what's at stake is our whole world.

We as a city can't fix everything, obviously. But because SF is one of the richest cities on the planet, it is our responsibility and our privilege to do as much as we can, to set the bar high, and to each year push for more and better solutions. Be the leaders the world so desperately needs right now.

Thank you.

Paula Heaney

We have been dithering over these issues for decades and things are just getting worse. This is a crisis and the city needs to act like it. Our city should be a leader on these issues.

Thank you.

**Subject:** A Downpayment on Our Climate Goals  
**Date:** Saturday, February 5, 2022 9:42:37 AM

---

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Commission on the Environment, Supervisor and Mayor,

I am a resident of San Francisco in District 1. I am also Vice Chair of the San Francisco Bicycle Advisory Committee.

As we recover from the pandemic and are trying to "build back better," it's imperative to prioritize climate and clean air goals to build a more climate resilient city for everyone. For me personally, I would like to witness a return to blue skies in September and October (instead of countless hazardous air days). I would like to witness a return to rainy Januarys and Februarys (instead of endless extreme drought). I would like to witness children being able to ride their bikes safely to school and back, the way I used to when I was a kid.

Therefore, I strongly support increasing staffing for the Department of the Environment. We cannot do the urgent work called for by the Climate Action Plan if we are unwilling to commit General Fund revenue to climate programs, and increasing staffing is a major first step.

I also would like to echo the call started last year for 1% for Climate Equity. The money it calls for – about \$125 million per year – is just a drop in the bucket on the down payment needed to fund a response to the climate emergency, but it will fund much-needed programs in electrification, transportation mode shift, just transition, and climate justice.

We can't avert climate disaster without immediate action. We need real and increased funding to deal with this emergency.

Thank you.

Sincerely,

Kristin Tieche

Coordinator Diedre Tanenberg (and Sup. Ronen),

Hi,

I'm Dr. Diamant-Wilson, a constituent in District 9. As a nurse practitioner, researcher, and parent I care about climate change because I'm hoping for a healthy and livable planet for the next generation.

I strongly support increasing staffing for the Department of the Environment. We cannot do the urgent work called for by the Climate Action Plan if we are unwilling to commit General Fund revenue to climate programs, and increasing staffing is a major first step.

I also would like to echo the call started last year for 1% for Climate Equity. The money it calls for – about \$125 million per year – is just a drop in the bucket on the down payment needed to fund a response to the climate emergency, but it will fund much-needed programs in electrification, transportation mode shift, just transition, and climate justice. The clock is ticking. We can't afford to wait. Thank you for supporting these asks.

Sincerely,  
Dr. Diamant-Wilson

Dear Ms Tanenberg

As a concerned resident of District 6 in San Francisco and a member of the 1,000 Grandmothers for Future Generations I need to know that our local government is acting to mitigate the effects of the present climate crisis. Political will is keeping the Federal Government from taking the drastic actions needed, the State of California is trying but the city of San Francisco can show the way.

Please increase the funding for the Department of the Environment and the programs needed to meet the city's climate goals. !% for Climate Equity is a very reasonable request and not too much to ask for, so that the work can be done to electrify buildings, shift transportation modes and bring justice to the climate action taken.

Thank you

Rosemary Jarrett

Hi: I live is Ahsha Safai's District 11. He is a proponent of Climate Activism. The SFE is very much the department of the city that should be empowered and funded well. We are looking at profound climate change caused issues in the near future, many of which can be dealt with MUCH more inexpensively by being proactive vs reactive. Money well spent. FUND SFE well. Millions of dollars of funding, not the \$1 million that is woefully insufficient.

Thanks, Beth DeRooy

Coordinator Diedre Tanenberg (and Sup. Haney),

Dear Commission on the Environment, Supervisor and Mayor,

We are at a dire inflection point for the restoration of our planet, our home. I've worked on conservation initiatives for many years but collectively we have not made enough progress to forestall the degradation of our precious environment. The climate crisis is now the most challenging threat to our existence - the evidence is clearly in front of us. That is why we must take extreme measures to fight back. And we can't fight back without the investment in dollars that is sorely needed.

The City has led the way in many aspects of this battle. The Department of the Environment should be lauded for the excellent work it has accomplished. But more staffing, more resources are required to put our bold proposals into action. We cannot do the urgent work called for by the Climate Action Plan if we are unwilling to commit General Fund revenue to climate programs, and increasing staffing is a major first step.

I also would like to echo the call started last year for 1% for Climate Equity. The money it calls for – about \$125 million per year – is just a drop in the bucket on the down payment needed to fund a response to the climate emergency, but it will fund much-needed programs in electrification, transportation mode shift, just transition, and climate justice.

We can't avert climate disaster without immediate action. We need real and increased funding to deal with this emergency.

Thank you.

Barbara Jue
