

What is Global Warming?

1. How do greenhouse gases keep our planet warm?

2. What is causing too much carbon dioxide to be in our atmosphere?

3. How do trees remove carbon dioxide from the atmosphere?

4. Why is preventing global warming important to you?

5. What do you think are three ways that you can help slow global warming?

What is Global Warming?

Answers:

1. How do greenhouse gases keep our planet warm?

They trap heat from the sun in our atmosphere.

2. What is causing too much carbon dioxide to be in our atmosphere?

The burning of fossil fuels and cutting down rainforests.

3. How do trees remove carbon dioxide from the atmosphere?

They inhale or absorb it.

4. Why is preventing global warming important to you?

Preventing global warming means preventing warmer winters, hotter summers, stronger hurricanes, frequent tornadoes, droughts, melting ice, and rising sea level.

5. What do you think are three ways that you can help slow global warming?

Eat less meat, use less fossil fuels, ride bike, take bus, turn off lights, wear a sweater.
